Topics

Diagnosis and management of orbital & intracranial vascular disease

Meningeal shunts

Skull base disease and the orbit

Paranasal sinus cancer

Benign and malignant orbital disease

Sphenoid wing meningioma

Optic nerve sheath meningioma

State-of-the-Art Radiotherapy

Neuro-radiology

Tumour biology

**The Cavalry and Guards Club,
Mayfair, London.**

The Cavalry and Guards Club, London

Saturday 23rd November 2019, 0830 – 1800

The management of diseases which involve the orbit and skull base is challenging, and requires effective collaboration across a wide range of specialties. Frequently, the decision to observe, operate or irradiate in a given patient is complex, and best practice may be uncertain, and vary from one patient to another.

The St John Ophthalmic Association (SOA) invites you to The Neuro-Orbital Symposium, the first in a series of masterclasses aimed at all clinicians who manage such patients. The Faculty from Manchester and London brings together experts from related disciplines, explores the most modern treatments, and provides a forum for frank discussion and debate.

The Neuro-Orbital Symposium is hosted by Mr Simon Pollock in the Cavalry and Guards Club, Pall Mall, which offers a unique and elegant setting for the meeting. Registration includes refreshments on arrival, a formal lunch in the Club's private dining room, and refreshments during the day. For those wishing to join their partners for lunch, there is a lunch ticket option at the registration stage.

The proceeds from this and all SOA meetings go directly to support St John's sight-saving work in East Jerusalem, the West Bank and Gaza. We train nurses and doctors in a challenging environment; your support is greatly appreciated.

The proceedings from this meeting will be summarised in a special edition of the Journal *Orbit*.

With kind regards and best wishes,

Priscilla Mathewson & Anouk Borg
